DETAILED ACTION

Allowable Subject Matter

1. Claims 1-29 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The main reason for allowance over the prior art is that the prior art fails to teach a solar simulation device and associated method of operation where a mirror element is disposed adjacent to a radiation source, said mirror receiving at least part of an ignition voltage used to cause the ignition of a radiation source as recited in claims 1 and 24.
4. The claimed invention distinguishes over the prior art because the mirror element required in claims 1 and 24 is not analogous to the electrode elements recited in prior art solar simulators. Specifically, a mirror is an element which reflects sufficient undiffused light to form an image. While a metallic electrode in a flash lamp may, by virtue of being a polished metal, may reflect light, there is no recited capacity in the prior art for these ignition electrodes to form an image. As such the instantly claimed invention contains an element, namely the mirror element of claims 1 and 24, which performs a fundamentally different function than the prior art solar simulation means.
5. Claims 1 and 24 are allowable, and claims 2-23 and 25-29 are allowable by virtue of their dependency.
6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

8. The following US Patent documents teach solar simulation means and their related art considered during examination and which are of particular relevance to at least the independent claims:

9. USPN 6,548,819 to Lovelady.

10. USPN 6,154,034 to Lovelady.

11. USPN 5,984,484 to Kruer.
